PROFILE SUMMARY

Data-driven Computer Engineering graduate with hands-on experience designing PostgreSQL schemas and creating multi-page Power BI reports using advanced DAX. Leveraging an IBM Data Science certification and strong Python skills to deliver actionable business insights as an Associate Data Scientist.

TECHNICAL SKILLS

SQL	PostgreSQL, MySQL · schema design, views, indexes, window functions, CTEs
BI Tools	Power BI · DAX, DirectQuery, time intelligence, drill-through, data modelling
Python	Pandas, NumPy, Matplotlib, Seaborn, Plotly, Scikit-learn
Other	Excel (pivot tables, VLOOKUP, inventory tracking) · Git · pgAdmin

EXPERIENCE

Data Analyst Intern · AZ Pharma Agency

Apr 2026 – Jun 2026

- Managed and maintained sales and inventory data in Excel across multiple product lines, ensuring accuracy and up-to-date stock records for the pharma distribution team.
- Built Excel trackers and monthly sales summaries to monitor stock movement and flag slow-moving SKUs for management review.

PROJECTS

E-Commerce Analytics · SQL + Power BI

2025

Stack: PostgreSQL · Power BI · DAX · DirectQuery · Olist Dataset (Kaggle)

- Designed a 9-table PostgreSQL schema for the Brazilian Olist e-commerce dataset, including primary keys, named foreign key constraints, and a geolocation table with documented rationale for omitting a PK due to repeating zip codes.
- Built a layered SQL view architecture: raw tables → intermediate views (bi_fact_order, bi_dim_product, bi_fact_review_latest) → a unified bi_fact_sales fact view; mirroring a dbt-style staging-to-mart pipeline.
- Implemented non-trivial SQL patterns: DISTINCT ON for review deduplication, ARRAY_AGG for dominant payment type selection, COALESCE for Portuguese/English category name fallback, and derived delivery_days and is_late flags in SQL to keep DAX clean.
- Created targeted indexes on join and filter columns (order_id, customer_id, product_id, purchase_timestamp) to optimise DirectQuery performance across a 100K+ row dataset.
- Built a 9-page Power BI report (Executive Overview, Sales Trends, Category & Product, Customer Geo, Delivery & Logistics, Reviews, Payments, Sellers, Drillthrough) with 20+ DAX measures including YTD, YoY%, Rolling 30D Revenue, On-time %, and dynamic Review Buckets.

Restaurant Analytics Dashboard · Power BI

2025

Stack: Power BI · DAX · Zomato Dataset

- Designed a 6-page Power BI dashboard (Executive Overview, Customer Analytics, Restaurant Performance, Delivery & Operations, Advanced Insights, Restaurant Details) from a Zomato restaurant dataset.
- Wrote DAX measures for business KPIs including Repeat Customer %, Late Delivery %, Revenue per Restaurant, and Orders per Customer — all interview-defensible and grounded in real business logic.
- Implemented a dynamic KPI switcher using a disconnected table and SELECTEDVALUE DAX pattern, allowing stakeholders to toggle between metrics on a single chart without duplicating visuals.
- Built a drill-through page for per-restaurant detail analysis, demonstrating understanding of Power BI report navigation UX and stakeholder-centric design..

Countries Dataset Analysis · Python EDA

2025

Stack: Python · Pandas · Matplotlib · Seaborn · Plotly

- Analysed socioeconomic indicators across 190+ countries — GDP, life expectancy, population density, and literacy rates — with Plotly choropleth maps for geographic visualisation and correlation analysis to surface regional clusters and outliers.

EDUCATION

B.E. Computer Engineering

2021 – 2025

VPPCOE & VA, Mumbai University

IBM Data Science Professional Certificate

2024

IBM / Coursera
